PROJECTS

- **Finding expert Doctors in the city thorough website**
  In this project we develop a website which is use to find the expert doctor.As when the user visit this website first he will register himself, after the registration user can check the whole list of the doctors.The user can check his profile and record and the availability of the doctor.If the doctor is available the user can also register their appointment.

- **Food Recipe web app**
  The project is built in modern technology that is React js. In this project we can select recipe name in search icon and api calls a recipe list that can show calories percent, fats percent etc.

- **Gemstone App**
  I have worked on Gemstone web app also. It is built in React js. This app is for online Gemstone buyers all over from the world.This is like Ecommerce website.
